Software Engineer | Full-Stack, DevOps, Cloud and Systems Programming

Full Stack Developer at Twizzit and First-Class Software Engineering graduate from the University of Glasgow, with four years of prior full-time industrial experience at Leidos UK. Experience spans full-stack product development, React and Node.js, cloud and security tooling, legacy C/Oracle modernisation and systems-oriented engineering. Comfortable contributing across the software development lifecycle, from requirements and design decisions through implementation, testing, debugging, production delivery and stakeholder communication.

EXPERIENCE

Twizzit — Full Stack Developer

Sep 2026 – Present

- Develop and support features across Twizzit's SaaS platform, contributing across frontend and backend systems and through the full software development lifecycle from solution design to production delivery.
- Implement new functionality, improve existing features, and investigate and resolve bugs and production issues, including end-to-end testing and ongoing application support.
- Work within Twizzit's Shape Up process, collaborating with developers and product stakeholders to understand problems, shape solutions and deliver maintainable changes.

Leidos UK — Graduate Apprentice Software Engineer

Aug 2022 – Aug 2026

- Built and shipped geospatial upload and validation workflows for the UK Next Flood Warning Service in React and Node.js, enabling emergency planners to define custom warning areas through interactive mapping.
- Delivered citizen-facing features and bug fixes across the delivery lifecycle, including requirements clarification, testing, defect resolution, patch releases, demos and stakeholder communication.
- Investigated and modernised legacy C/Oracle data-access components using Oracle Call Interface, producing recommendations, a proof of concept and supporting technical documentation.
- Supported security monitoring and alert triage using Splunk and AWS-native tooling in a cyber operations environment.
- Designed and ran mission simulations for maritime autonomy R&D, translating collision-avoidance research into practical engineering guidance and reusable evaluation scenarios.
- Produced technical documentation, shared knowledge and helped onboard teammates across development environments, workflows and project context.

EDUCATION

University of Glasgow — BSc (Hons) Software Engineering with Human-Computer Interaction

Graduated Jul 2026 — First Class Honours

- Awarded First Class Honours and the prize for the highest overall GPA in the 2026 Software Engineering Graduate Apprenticeship cohort.
- Degree combined software engineering with Human-Computer Interaction, release engineering, security, data science and research-based study while working full-time at Leidos.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, C#, JavaScript/TypeScript, SQL

Backend, systems & web: React, Node.js, .NET, Spring, Django, Flask, REST APIs, microservices

Cloud, DevOps & tooling: AWS, Azure exposure, Docker, Git, GitHub Actions, GitLab CI, Bamboo, Terraform, Ansible, Linux, Splunk

Engineering practice: CI/CD, testing, release engineering, requirements elicitation, technical documentation, stakeholder engagement, agile delivery, legacy modernization

CERTIFICATIONS, RECOGNITION & ADDITIONAL INFORMATION

Certifications: AWS Certified Cloud Practitioner

Awards: Leidos STAR Award; ScotlandIS Digital Tech Rising Star Award – shortlisted finalist (1 of 3)

Leadership: UK STEM Ambassador and PVG scheme member supporting school talks, workshops, mentoring and office visits

Languages: English (native), Greek (conversational), French (basic – actively learning)

Additional information: Holds current UK Security Clearance (SC) and experience working in security-sensitive, regulated engineering environments.
